

## **AT&T Wireless**

### **Description:**

Mobility is the heart of AT&T. It's about giving you the freedom to choose when, where and how you communicate.

Although mobility and wireless are not synonymous, wireless plays a critical role in delivering on the promise of mobility for our customers. Use a mobile phone to remotely program a digital video recorder. Surf the Internet by using a PDA. Remotely monitor your home by accessing video from a laptop's wireless Internet connection.

77 million customers across the United States rely on wireless voice and data services from AT&T.

We are one of the nation's premier wireless providers based on subscribers. And we provide the best international coverage of any wireless carrier worldwide.

Our service is backed by perhaps the most customer-friendly policies and practices of any U.S. wireless carrier. Simplified rate plans, street-level coverage maps, easy-to-use parental controls and a 30-day no-questions-asked return policy are just a few reasons AT&T is the first national carrier to be awarded the CTIA's "Consumer Code for Wireless Service" seal.

In fact, we lead the industry in wireless telephone service improvements, gaining more than anyone else over the last year as well as over the last five years in the American Consumer Satisfaction Index conducted by the University of Michigan.

Our network provides a nationwide GSM/GPRS (Global System for Mobile communications/ General Packet Radio Services) footprint across 100 percent of our service area. It is used by more than 3.8 billion people (more than 88 percent of all wireless users) in 200-plus countries.

We offer the largest international voice coverage of any wireless carrier worldwide, giving customers the ability to make calls on all seven continents and in more than 200 countries. We offer wireless data coverage in more countries than any U.S. carrier with wireless data-roaming in more than 170 countries for laptops, PDAs and other data services, and third-generation (3G) services in more than 70 countries. We also offer wireless service on more than 130 cruise ships worldwide.

When not

in a 3G coverage area, AT&T offers the largest national high speed wireless data network with EDGE (Enhanced Data Rate for GSM Evolution) technology, available in 13,000 cities and along almost 40,000 miles of U.S. highways.
